

We're taking to the streets

Mexico City E-Prix

March 3 2018

GKN takes to the streets at the Mexico City E-Prix:

The Formula E racers will battle it out on one of the highest altitude race tracks in the world at the Mexico City E-Prix, the Autódromo Hermanos Rodríguez.

With 18 turns packed into little over 2km, this is a challenging technical circuit with a lot of braking required. This affects the energy regeneration of the vehicles, a topic which will be on the minds of all the race engineers in Mexico.

Panasonic Jaguar Racing will be looking to build on their strong track record from last season, where Mitch achieved a solid fourth place finish here.
