

> Experience better

Your customers rely on you.

Safety and driving comfort without compromise.

When it comes to driving stability and safety, your customers rely on you. That's why you should rely exclusively on the expertise of one of the leading OE suppliers. With high-performance suspension springs from GKN Automotive and its aftermarket brand SPIDAN, you can be sure they meet the exact specifications of the vehicle manufacturer, are quick and easy to install, and restore original driving characteristics from the very first kilometre. Even when fully loaded on the way to a summer holiday. Don't compromise when it comes to safety.

Safety, driving comfort and a 5-year warranty – with suspension springs from GKN Automotive and SPIDAN:

- > OE technology: Minibloc springs made from high-precision, tapered wire with a progressive spring rate
- > Precisely match OE specifications
- > 5-year warranty when replaced in pairs*
- > Easy identification thanks to OE colour coding
- > Problem-free installation due to fitting on original installation and fitting direction marking on spring

Top OE quality. Simple installation.

Suspension springs from GKN Automotive and its aftermarket brand SPIDAN are manufactured precisely to OE standards and match the vehicle manufacturer's specifications exactly in terms of material, shape, dimensions and spring rate. This guarantees that the springs are perfectly tailored to each specific vehicle type.

This is the only way to ensure safety, driving comfort and a long spring service life under all road conditions – even with a fully loaded vehicle. The wheel always maintains perfect contact with the road surface.

GKN Automotive is one of the few aftermarket suppliers with access to the necessary OE technology, including the ability to manufacture springs from tapered wire.

As a leading producer of OE drivetrain components, GKN Automotive works closely with many major vehicle manufacturers, which means that matching suspension springs are available for nearly all key vehicle models.

Installation is especially straightforward thanks to clearly marked fitting direction and easy identification of the correct spring using colour codes that match OE markings.

Our tool recommendation: Use plastic inserts during installation to protect the painted surface of the spring. This simple step helps prevent corrosion damage.

GKN Automotive / SPIDAN:

Safety and driving comfort even with a fully loaded vehicle.

Competitor springs:

Excessive sagging and unstable handling when the vehicle is fully loaded.

*GKN Automotive offers a 5-year warranty when springs are replaced in axle pairs. Important: This warranty is valid only if both springs are returned. The standard legal warranty period of 2 years applies when replacing a single spring. Please note that replacing springs individually may compromise vehicle safety, as the load-bearing capacity of the old and new springs may differ.
